ABSTRACT

Anik Aniqoh. Designing ESP Materials Based on the Task Based Language Learning for the Medical Laboratory Technology Students in the Health Polytechnics Semarang: A Research And Development. Graduate School. Muhammadiyah Surakarta University. Prof. Dr. Endang Fauziati, M.Hum and Dr. Anam Sutopo, S.Pd., M.Hum. 2018.

This research is mainly intended to develop materials of English Specific Purposes for the first semester of Medical Laboratory Technology students based on Task Based Language Learning (TBLL). The objectives of the study are to investigate the quality of textbook entitled “Handout of English1”, to explain how to design the prototype of English for Specific Purposes materials, and to explain the prototype quality of English for Specific Purposes materials for students of Medical Laboratory Technology Department. This research is a Research and Development. The object of this study is “Handout of English 1” used in English Foreign Learning for the students of the first semester who study in Medical Laboratory Technology. In collecting the data, the writer uses observation, questionnaire, interview, and documentation. Presenting, classifying, describing the data, making conclusion and drawing implication are the methods in analyzing the data. There are three stages applied to develop the materials including exploration, development, and evaluation. The findings show that the students of Medical Laboratory Technology need English Specific Purposes materials to elaborate their academics and careers as laboratory technicians. English Specific Purposes materials here are designed completely with the syllabus and lesson plans based on the framework of Willis with her cycles phases; they are pre-task, task, and report.

Keywords: *English Specific Purposes, Task Based Language Learning*
